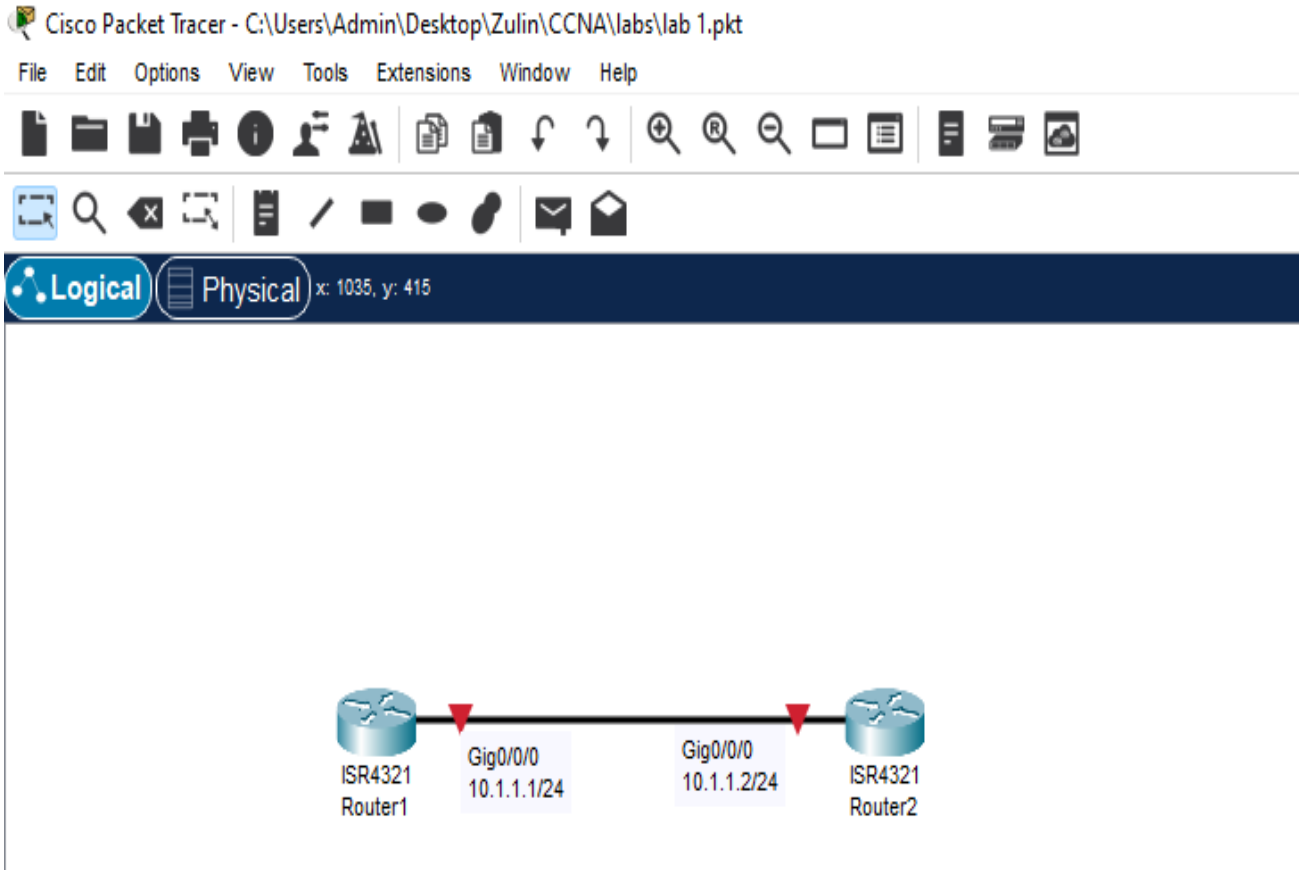
Tasks 1:
Power on devices and then configure the devices as follows:
1) Configure IP addresses as shown in the diagram
2) Ensure routers can ping each other
3) Configure an enable password of "cisco"
4) Encrypt the enable password
5) Configure a secret password of "cisco123"
6) Configure the first 5 telnet lines and use a line password of cisco on them
7) Make sure you can telnet from one device to the other
8) Configure a console password of "cisco" and test
Task 2:
Do the initial configuration of a Router



1) Configure IP addresses as shown in the diagram

Router 1

IOS Command Line Interface

```
Router>en
Router#config t
Enter configuration commands, one per line.  End with CNTL/Z.
Router(config)#int
Router(config)#interface gig
Router(config)#interface gigabitEthernet 0/0/0
Router(config-if)#ip add
Router(config-if)#ip address 10.1.1.1 255.255.255.0
Router(config-if)#no shut
Router(config-if)#no shutdown

Router(config-if)#
%LINK-5-CHANGED: Interface GigabitEthernet0/0/0, changed state to up

Router(config-if)#exit
Router(config)#exit
Router#
%SYS-5-CONFIG_I: Configured from console by console

Router#show ip inter
Router#show ip interface brief
Interface              IP-Address      OK? Method Status                Protocol
GigabitEthernet0/0/0   10.1.1.1        YES manual up                    down
GigabitEthernet0/0/1   unassigned      YES unset  administratively down down
Vlan1                  unassigned      YES unset  administratively down down
Router#show run
